

1. We need to find out where theagricultural land is in India

2.How many types of crops can be produced in India should

be explored

3.It is necessary to know which crops to produce in which season

1.This project is helping India to progress in agriculture sector

What other thoughts might influence their behavior?

2.It helps to further strengthen the agriculture sector by marketing the produce

3.I am doing this project work to find out which crop varieties are valued in India and which region has good yield.

1.Through this project I was able

intricacies of agricultural

to learn the

cultivation in India

1.I visited villages in India and stayed with the people and learned about the varieties of crops

2.I visited the Indian
Meteorological
Department and learned about seasonal weather

3.I learned the training method and sales methods through the book written by the ancestors through this website

2. Agriculture in India is helping to survive and grow

3.It helps the next generation to know about agriculture better

Does

What behavior have we observed? What can we imagine them doing?

Feels

What are their fears, frustrations, and anxieties? What other feelings might influence their behavior?
